## What Is Blockchain?

Blockchain is the innovative database technology that's at the heart of nearly all cryptocurrencies. By distributing identical copies of a database across an entire network, blockchain makes it very difficult to hack or cheat the system. Blockchain can also be used to record and transfer the ownership of different assets. This is currently very popular with digital assets like NFTs, a representation of ownership of digital art and videos.

## What Is NFT?

NFT means non-fungible tokens. These cryptographic assets are based on blockchain technology and have unique identification codes. The main function of NFTs in the supply chain lies in authenticating products, ensuring their quality and verifying their origin. NFTs are tokens that we can use to represent ownership of unique items. Digital asset that represents real-world objects like art, music, in-game items and videos. One of the obvious benefits of buying art is it lets you financially support artists you like. They let us tokenise things like art, collectibles, even real estate. The main function of NFTs in the supply chain lies in authenticating products, ensuring their quality and verifying their origin.

## What Is Gaming?

Blockchain games which we also know as crypto or NFT games They contain elements based on blockchain technology. Blockchain games give players real ownership of these game assets. like assets in the blockchain game Currency Points can be traded for crypto currency which can be further converted into fiat money. BitRed Tokens will help you buy materials inside the game. Blockchain gaming gives players full rights over on digital assets that they earn up with through their participation in the game.
